MRS. R. O. BACKHOUSE

DAFFODILS FOR NATURALIZING

By naturalizing is meant planting bulbs in sizeable groups to give the appearance of spontaneous growth. In places where they can grow with less attention than they would get in the garden, they appear to care for themselves. Greater quantities of bulbs are used, and it is best to plant them in drifts to give a natural appearance. Many types of sturdy bulbs, such as Daffodils, Crocus, Muscari, Scilla, and Chiono-

Fall is a good time to make a new Lawn

During the moderate fall weather, grass seed germinates quickly and makes vigorous growth. Also, few weeks germinate in the fall, thus permitting the lawn to establish itself without interference.

Follow these six steps in making a new lawn:

1. Spade or plow the area to a depth of six or eight inches. Pulverize the soil thoroughly.
2. Apply a complete, balanced plant food as prescribed by the manufacturer.
3. Work the plant food into the top few inches of soil.
4. Sow a good grade of grass seed at the rate of five pounds per 1000 square feet. To secure even distribution, apply one-half of the seed crosswise, the other half lengthwise.
5. Roll the seeded area to imbed the seed in the soil.
6. Water thoroughly, using a fine spray. Keep moist by daily sprinklings until grass is established. Then soak to a depth of five or six inches once or twice a week.

Navlet's LAWN SEED

There are many advantages in securing Navlet carefully executed formulas of turf and lawn grass mixtures for definite exposures and soil conditions. No one grass, or grass seed mixture will thrive under all exposures surrounding a home, especially if there are hedges or trees to create shade. Single strain lawns, of Bent, or Fescue, require considerably more attention than the average Home Gardener cares to or has the time to give them.

4-WAY SERVICE FOR YOUR LAWN

1. **The Right Seed**—The "better lawns" we sell get their start with the right seed.
2. **The Right Foods**—Whatever your lawn feeding problems, we have the right plant foods for it.
3. **Tested Weed Controls**—We have the full range of weed controls and can show you how to vanquish lawn weeds easily and surely.
4. **Complete Lawn Know-How**—We have a thorough knowledge of the lawn problems of this particular area. This know-how is at your command at any time.

A-1 Special Turf Mixture—Contains a portion of Bent in combination with other fine-leaved, turf-forming, long-lived grasses. Improves with age. No Rye or Clover. We offer this as the best blend for a permanent turf. Freest from weeds of any mixture. 1 lb. \$1.75; 10 lbs., \$15.00. (Sow 1 lb. to 250 sq. ft. of area.)

Golden Gate Mixture—A popular mixture of hardy grasses with a little Clover, which grows quickly and stands considerable abuse. Thrives in light and medium heavy soils. 1 lb., 75c; 10 lbs., \$7.00. (Sow 1 lb. to 100 sq. ft. of area.)

Navlet's Emerald Lawn Mixture—A carefully blended mixture of permanent fine leaved deep green grasses without Bent, Clover or Rye. Will make a hardy, green turf the year round. Satisfactory for sun and half-shaded situations. 1 lb., \$1.50; 10 lbs., \$12.50. (Sow 1 lb. to 175 sq. ft. of area.)

Navlet's High School Lawn Mixture—A combination of ruggedness with a smooth, velvety appearance is given by this sturdy mixture. Thrives in heavy soil, where summers are hot. 1 lb., \$1.25; 10 lbs., \$11.25. (Sow 1 lb. to 150 sq. ft. of area.)

Shady Lawn Grass—This is a special blend of shade-loving grasses for lawns facing the North without much sunshine and shady spots under

trees and places where there is little direct sunlight. It will quickly produce an abundant and even growth of beautiful deep green turf. 1 lb., \$1.50; 10 lbs., \$12.50. (Sow 1 lb. to 175 sq. ft. of area.)

Lippia Plants—This creeping lawn plant solves the problem of maintaining a beautiful lawn through the dry California summer. Requires little or no water. \$2.50 per flat. (Will cover area of 100 sq. ft.) Shipped at purchaser's expense.

PLEASE NOTE: Write for prices on larger quantities. Grass seed prices fluctuate with the market and are not guaranteed.

Blue Grass, Kentucky (Poa pratensis)—Produces a firm, velvety, elastic turf of deep, vivid green. Thrives in open situation away from summer fogs. Roots deeply, forming a permanent turf on the heavier types of soils. Unsatisfactory on sandy soils.

Chewing's Fescue (Festuca rubra var., fallax)—A hardy, low-growing grass. Needlelike spears rarely exceed 6 inches in height. Dense, turf-forming habit. Very hardy on the thin or poorer types of gravelly and sandy soils. Does well in sun or partial shade. 1 lb., \$1.50; 10 lbs., \$12.50. (Sow 1 lb. to 150 sq. ft. of area.)

Bent (Agrostis tenuis Astoriana)—Especially suited to the heavier soils. It spreads from underground creeping roots which produce a splendid upright growth of fine texture and of a rich green color. Stands hard usage. **Certified Seed:** 1 lb., \$2.25. (Sow 1 lb. to 350-500 sq. ft. of area.)

Rye, Pacey's Pacific Rye (Lolium perenne)—Valuable in lawn as a nurse grass and where quick results are desired. Leaves narrow, flat and smooth, the under side being glossy. Is also known in the Bay District as Pacific Rye. It is a short seeded type, more desirable than Australian Rye. 1 lb., 50c; 10 lbs., \$4.50. (Sow 1 lb. to 100 sq. ft. of area.)

White Clover (Trifolium repens)—Of dwarf habit, making an excellent turf that stands constant tramping. Used considerably in mixtures as a nurse crop as it germinates rapidly. 1 lb., \$1.75. (Sow 1 lb. to 200-300 sq. ft. of area.)

FOR SUNNY SPOTS

Some sunny lawns require one type of seed; some need another. No single variety or mixture of varieties can take care of all situations. But whatever the need, we can supply the seed that is best suited—and can help you to plan and produce the beautiful lawn you wish.

FOR SHADY SPOTS

Wherever cool shade makes it difficult to obtain a good lawn, our special shade mixture is heartily recommended. We have chosen excellent quality, shade enduring grasses and clovers . . . and have blended them into a mixture that will give you surprising results.

Extra Fancy—Specially recleaned. Far superior to and more economical than cheaper grades. (Weighs 30 lbs. to the bushel.) 1 lb., \$1.75; 10 lbs., \$15.00. (Sow 1 lb. to 175 sq. ft. of area.)

FOR SPECIAL USES

We have just the right grass seed for every purpose. We can give you special deep-rooted grasses for the sloping lawn, the ideal grasses for planting on golf courses, parks, estates, cemeteries . . . or for just any other special use. Just tell us what you want.
